

35. (Amended) A delivery system according to Claim 32 adapted for delivery of about 0.02 to 20 milligrams per day (Nitroglycerin equivalent) of a vasodilator selected from the group comprising Nitroglycerin in pill, patch, ointment, cream, inhaler, spray and other forms, Nitroglycerin equivalents and substitutes, comprising p.o. clonidine, [Dynacirc (l isradipine)], hydrazine, nifedipine, and/or other medicines selected from the empirical group of medications which have the common characteristic of causing smooth muscle relaxation and/or which systemically reduce pulmonary capillary wedge pressure, and combinations of the foregoing.

36. (Amended) A system [method] according to Claim 32 [21] wherein the disease is selected from the group consisting of fibromyalgia, gastric disorders and other systemic disorders, psychosis, other psychiatric disease, attention deficit disorder and systemic disorders, comprising vasospasm as a component.

37. (Amended) A system [method] according to Claim 32 [21] wherein the disease is selected from the group consisting of systemic disorders comprising vasospasm as a component.

38. A titration system for diagnosing and treating a disease caused at least partially by insufficient cerebral perfusion, comprising in combination: [operating] a flow measuring device to test for vasospasm, [applying] a dosage device which administers a vasospasm-reducing dosage of a medicine selected from the empirical group of medications which have the common characteristic of causing smooth muscle relaxation and/or which reduce pulmonary capillary

"Nitroglycerin equivalent" is a dosage of a chosen vasodilator which dilates to the same extent as a dosage of nitroglycerin within the range stated.
